GHG EMISSIONS BENCHMARK | JAPAN AUTOMAKERS 日本の自動車メーカー

Toyota · Honda · Nissan · Subaru | FY2023–FY2025

FISCAL YEAR: FY2025

OPERATIONAL EMISSIONS | VALUE-CHAIN EMISSIONS | DISCLOSURE AND ASSURANCE

Company Profile

Honda | **Nissan** | Subaru | Toyota

Revenue (¥ trillion)
12.63

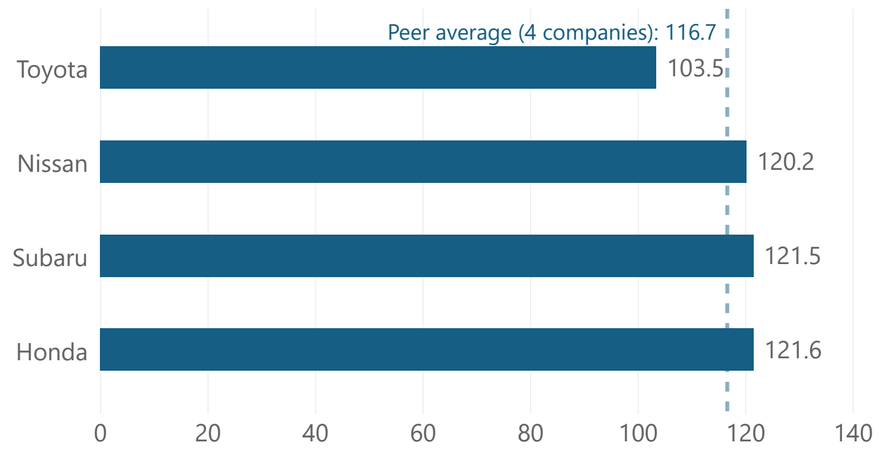

Units sold (millions)
3.3

Headcount
132,790

Operational Emissions: Scope 1+2 Intensity

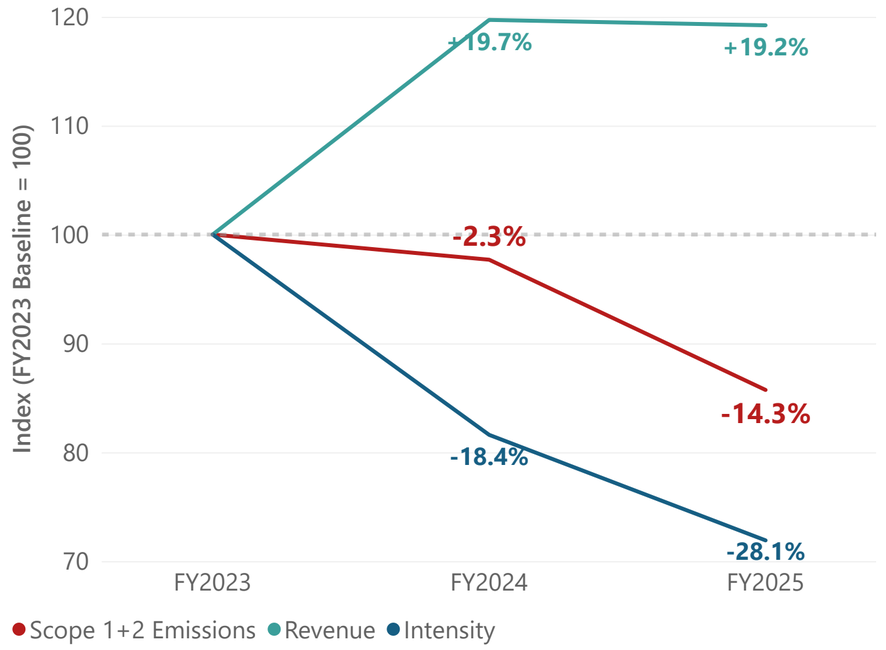

Peer Average Intensity (t per ¥bn)	Lowest Intensity Company	Largest Scope 1+2 Emissions Reduction
116.7	**Toyota**	**Honda**
	t per ¥bn **103.5**	vs. prior year **-16.0%**

Scope 1+2 Intensity, FY2025 (t CO_2/CO_2e per ¥ billion revenue)

Emissions, Revenue and Intensity, Nissan (FY2023 Baseline)

Intensity falls when revenue grows faster than emissions, whether emissions rise or fall. Labels show change from FY2023 baseline.

Notes:

- **Honda figures cover its consolidated group**, including motorcycles, power products and financial services; they cannot be separated from automobiles in the disclosed data.
- **Subaru restated its FY2023–FY2024 Scope 1+2**, citing aggregation errors, and the domestic scope it reports changed (52 to 39 consolidated subsidiaries), so part of the change may reflect scope, not operations.
- **Gas basis differs**: Honda reports Scope 1+2 in CO_2e; Nissan, Subaru and Toyota report CO_2 only. In FY2025, Nissan, Subaru and Honda are within about 1% of each other, so their order is not meaningful.
- **Revenue is reported in yen**; currency movements may affect intensity trends.

GHG EMISSIONS BENCHMARK | JAPAN AUTOMAKERS 日本の自動車メーカー

Toyota · Honda · Nissan · Subaru | FY2023–FY2025

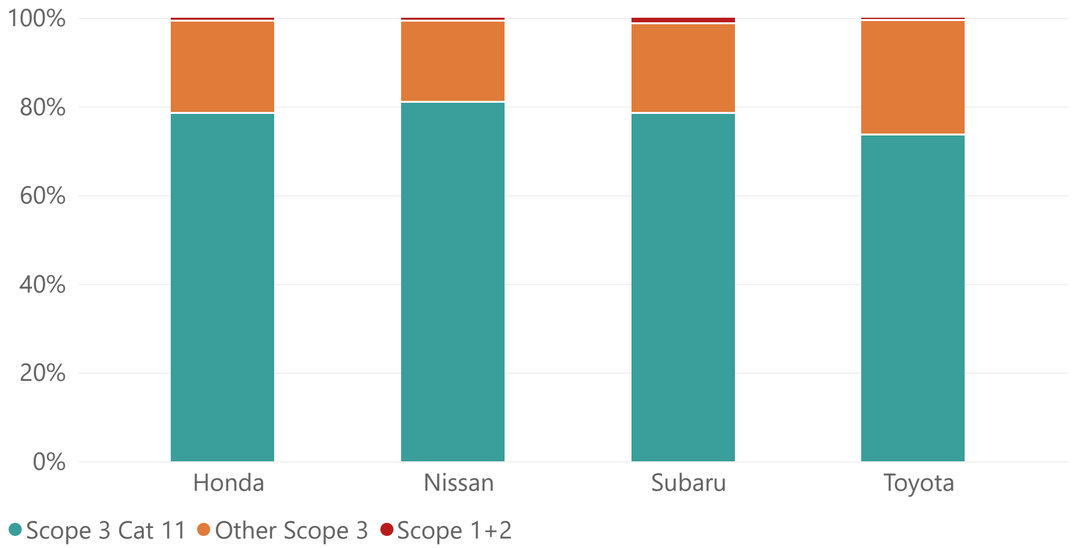

FISCAL YEAR: FY2025

Value-chain Emissions: Scope 3 Breakdown

Reported Scope 3 by category, one year at a time. Changes in calculation method mean year-over-year comparisons don't hold.

Scope 1+2 vs Scope 3, FY2025 (share of reported total)

Operational (Scope 1+2) emissions are only 0.8%–1.5% of each company's reported footprint in FY2025; most comes from customers' use of sold vehicles (Category 11).

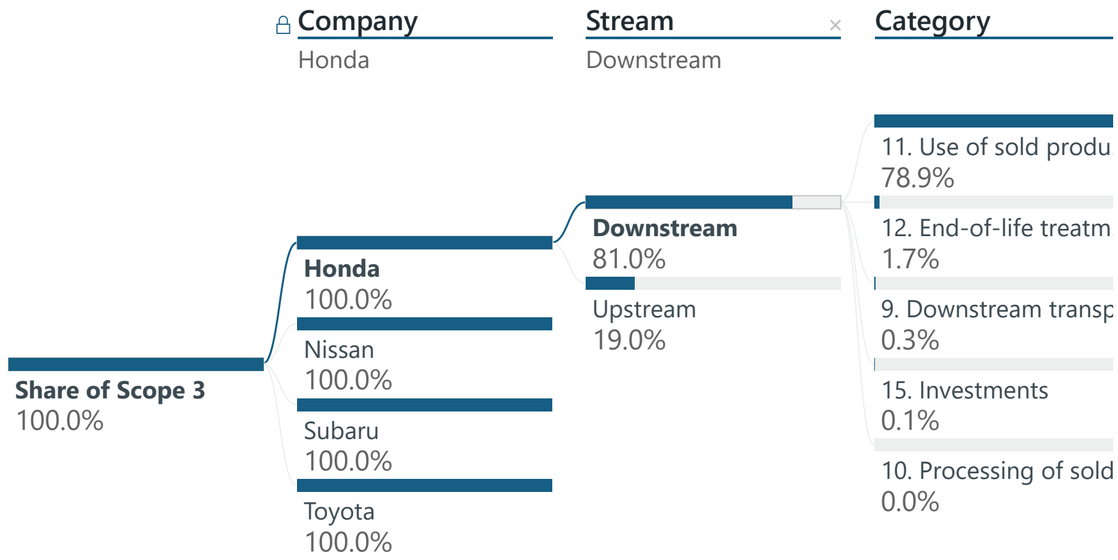

Notes:

- **Nissan FY2025, Scope 3 Cat 1 and 11:** Calculation methods revised. Scope 3 Total rose 31.5% (116.7 → 153.5 Mt), but FY2023–FY2024 were not recalculated under the new methods, so the change is not like-for-like.
- **Toyota FY2025, Scope 3 Cat 3, 4, 6, 7, 9, 13, 14:** Gas basis changed from CO_2 to CO_2e.
- **Toyota FY2025, Scope 3 Cat 1, 10, 12:** Recalculated under revised JAMA guidelines.
- **Honda:** Consolidated figures include motorcycles, power products and financial services.

Share of Reported Scope 3 by Category, FY2025

Category 11 (use of sold products) averages 78% of reported Scope 3 across the four companies (range 74%–81%) in FY2025. Category 1 (purchased goods and services) is second, averaging 17% (range 15%–22%).

Each company uses its own gas basis and method, so compare shares between companies, not totals.

DISCLOSURE AND ASSURANCE

Disclosure & Assurance Status by Scope and Category, FY2025

Disclosure status, assurance level and gas basis for each reported figure.

Scope Group

Scope 1 & 2	Scope 3 Total
Upstream (Cat 1–8)	Downstream (Cat 9–15)

Notes:
Assurance levels as stated in each company's assurance report; colour convention adapted from Net Zero Tracker.

- **Green** = Assured (Limited/Reasonable) in the report the figure was taken from.
- **Light green** = Not assured in the report the figure was taken from; the figure as first published received Limited assurance (it may since have been restated).
- **Yellow** = Disclosed, but not assured (for Scope 3 Total: the total itself, even where some categories were assured).
- **Red** = Not disclosed.
